

INSTALLATION INSTRUCTIONS

DRY INSTALLATION

1. Clean your plastics. Remove all dirt, oil, old adhesive, etc. Rinse with water and dry with a lint-free cloth.
2. Before applying new graphic, check to see how the graphic lines up on your plates. Check to see how holes line up; see how it fits with curves, etc.

3. Trim the backing paper from around the perimeter of the background.
4. Peel off half of the backing being careful not to allow dust or debris on the adhesive. Cut a strip out of the backing (vertical on front # plates, horizontal on side # plates.) Put the remaining backing onto the graphic.

5. Preventing the center strip from sticking to the number plate, set the graphic on the number plate and carefully line it up.
6. Once it is lined up properly, apply the center strip of the graphic to the number plate.

7. Peel back the paper from one half and hold the graphic up, away from the number plate. Use your fingers and slowly apply the graphic by sliding your finger back and forth along the graphic and number plate, pushing out any bubbles or wrinkles.

8. Take off the other half of the decals backing and apply it in the same manner.
