

Tusk Left Hand Dual Sport Mirror

Tusk motorcycle and ATV parts and accessories are designed and manufactured with high quality standards. The Tusk Dual Sport Mirror is no exception. The mirror can be used on both motorcycles and ATVs. It has a 7/8" clamping area to fit just about any handlebar. The rearview mirror can be mounted in an upright or upside-down position depending on personal preference. In either position, the mirror can be folded out of the way when riding off-road or not in use.

Mounting

- Locate the desired location for the mirror on the handlebar. If necessary, adjust controls to make room for the mirror.
- Remove the Philips head bolt. Attach mirror to the handlebar.
- Tighten the Philips head bolt so the mirror is stable.
- While sitting on the motorcycle or atv, make sure the mirror is positioned to give a clear rear view. Note that the mirror can be mounted upright or upside-down. If the mirror needs to be mounted further to the inside of the handlebar, a clearer view may be found in the upside-down position.

Off-road riding

- When riding off-road and the mirror is not needed, it can be folded out of the way quickly and easily.
