

LEXX Silencer Packing Instructions

Thank you for purchasing Lexx Silencer packing. Lexx packing is made of top quality fiberglass to absorb sound and provide optimal performance. Our dense, high temperature fiberglass ensures longevity.

To ensure optimal performance and sound absorption we recommend that you repack silencer often (2-stroke silencers every 15-25 hours of use, 4-stroke silencers every 20-30 hours of use). Improper jetting or riding in mud and sand may require more frequent packing changes.

Silencer repacking instructions

Note: Every silencer differs in design and construction. The below steps are the basic steps for most silencers. Refer to vehicle owners/service manual for your vehicle's specific repacking instructions or consult a professional mechanic if necessary.

Note: The use of rubber gloves is recommended.

1. Remove silencer from the vehicle.
2. Remove silencer core from the canister (refer to service manual). Clean off any old silicone.
3. Remove used packing and discard.
4. Clean the perforated core with a wire brush.
5. Put the new Lexx packing on a table and roll the packing around the perforated core.
6. Wrap ½" masking tape around the packing to hold it in place.
7. Reassemble the silencer (refer to service manual). Use high temp silicone to ensure a proper seal to the canister.
8. Inspect the silencer and make sure there is no packing blocking the inside of the core.
